

AMV

Meeting point, management and information for your employees

We tackled the design and global development of a new intranet for AMV, in collaboration with their communication department, together with the collaborative and news portal. The objective: to provide the company with a corporate tool as a meeting, management and information point for its employees.

AMV is constantly involved in the motorcycle world through competition, organization of events and participation in major events in the sector. Its main objective is to offer motorcyclists a different approach to motorcycle insurance.

Description

The Pasiona team tackled the development of an intranet in Office 365. The design and interactive layout was carried out in Invision, and the tests were passed with the company's key users. Once the design was validated, the branding and functionalities were implemented in Sharepoint Online using Webparts Spfx in Sharepoint fw based on React and Typescript.
